

Mental Health Job Description

Senior Java Developer with experience in building and maintaining web applications. Must be interested in updating and enhancing a web based application system developed in Java on a Struts Framework that collects and reports client level data from different providers.

You will be part of a team that works on mission-critical applications. You will be responsible for Java/Java EE application development while providing expertise in the full software development lifecycle, from concept and design to testing.

Duties and Responsibilities:

- Maintain and support mission-critical application while delivering high-availability and performance.
- Contribute in all phases of the development lifecycle.
- Write well designed, testable, efficient code.
- Ensure designs are in compliance with specifications.
- Prepare and produce releases of software components.
- Administration of an application server is possible. Application is currently running on a Websphere Application Server in an AIX environment.
- Supports users by developing documentation.

Skill Set and Requirements:

- Expert knowledge in Java/Java EE application development
- Proven working experience in Java development in Rational Application Developer for WebSphere (version 8 and up)
- Working knowledge of Relational Database Design
- SQL Server development experience
- Proficient in SQL
- Resolves technical issues through debugging, research and investigation
- Knowledge and understanding of SQL Server Procedures and Functions
- Experience in Object Oriented Design
- Experience in developing web applications using Struts Framework
- Quality and Assurance Testing
- HTML
- CSS
- Experience with a Java Application server is a plus

Salary:

TBD

Deadline to apply: June 30, 2015
